useless, wasted 1 hour of my

time in the dark. With all the

hype about this stuff I was

so excited to try it but it isn't

worth the slightest bit of

money and I couldn't even do it by myself. First it didn't install the program at all. Once I did I was so far behind on this crap I could barely stand it. If you don't know what you are doing you aren't going to get anywhere. I would recommend the Windows 7 update if you want it to work

but otherwise stay away.

Review by Bernadette

Review by Francis I've used
an external tool,

WinPatcher, for some years
now to replace all Vista icon
files but it's always been a
huge job. Seven Remix,
however, does what I want
to do much more easily. It
doesn't make any changes to

the registry but the result is that all the default icons come back and the user interface is much more Windows 7-like. The only downside is that the installer doesn't back up your old icons files (it's using them until the Vista system files are replaced) so you'll have to remove Seven

Remix (which is really easy) to get back to your old icons. If you want to try it before you buy it go to this page: Seven Remix is quite a "high end" tool but I'd say that the price is fair. If you want it more or less install it and see what it does. If you want it to replace the Vista icons of all your programs

then you'll need to be
careful with it and remove
