Adobe Photoshop Luminance (BKG) – BKG is a high-quality 8-bit black-and-white representation of a color image. It is important to note that it is best used for when you want to keep the color space and white balance of your original file or the image. For example, if you are looking to share the design on social media without losing the original color scheme, BKG can achieve that. However BKG is not always accurate and may lose the tonality of the photograph, depending on the exposure. Adobe Photoshop Color (RGB) – RGB color space is the most typical and common color space in digital photography, video, and graphics. Although this is the most affordable and inherited color model used by most digital cameras, this model has an inherent problem when it comes to correcting color. Professional color correctors can strictly rely on their knowledge and expertise, but it becomes very difficult for casual users to match and correct the color accurately and nondestructively. Our recommendation is to use RGB for the initial setting and then to convert the image to the CMYK color space, and then have the RGB model corrected again.
