Apple likes to keep relatively close tabs on all of the images that come across its photo streams—because photos leak, photos get leaked, and Apple tends to employ a degree of paranoia about copies of photos being made and sent around. Expect a bit of a lockdown when you first start using Camera+—your images are all managed through the Services menu in Photos. You might only be able to start sharing certain sets, but everything that you can create in Apple's official apps is accessible through the Services menu. Any third-party apps you have on your iOS device will get deleted, and you'll have to start over. The Good: Excellent image processing and clipping paths. One of the easiest tools I've ever used for brushing was transfer diapering. Excellent search abilities make it easy to find, add, remove, or even fill in sections of images. Excellent use of colors. Interface is fast and easy to use. Number of images to play with is huge (considering most of them cost only \$15, it's not been easy for Photoshop to become one of my go-to apps). Editing things like text is a snap with this app, though I love Adobe's Kuler feature more. One of my employees had this app downloaded on his iPad Pro, and he's often asked me to open up applications to show him how it works (we use Adobe's CC, which is a pricey perk, of course). The fact that he wasn't quite familiar with the app, and that it took him all of about a minute on launch to figure out how to create a basic, two-column design, is pretty impressive. There's an entire tutorial on how to use the app, and he's more than willing to take top marks for just about anything else.
