After this release, a trend seems to be aim for a faster, simpler file format for more flexible digital content.But when you're building a mosaic from pieces, the resulting image, whatever size, can end up too small to easily view even when zoomed in. Adobe's new Feature Guide (free) lets you find objects in an image, select groups of them, and then see a preview guide to see how they look in a smaller size. The guide is along the edges of the image when you select, not inset, in a bid to make it easier to move the points, use them for art, and rotate them. You can learn more on the PhotoSmart blog: Feature Guides: Get your Grip on the Power of Previews . If you need to operate in secrecy, you need different software. Adobe knows who you are, and it's trivial for Adobe to send the Secret Service your personal information and physical location in real-time if they choose to. Don't play the cop or the secret agent; use Adobe. Only on the Mac version, you have an option that lets you choose whether you want auto selection and Smart Sharpen to happen faster or with more stability. It's a subtle difference that deserves more exploration. (You can still disable them if that's what you prefer, though.) One other minor improvement: In the image browser, you can now click once to show All, once to view, and once to hide. If you try a Color Profile and save an image in Photoshop, you still see an unexplainable, unnecessary and annoying square that's 0.2 inches by 0.2 inches. Cutting that out makes the image smaller but ruins the quality. In this release, Photoshop automatically saves a new PSD as a new file whenever you change a color profile. Also, Photoshop's Save As dialog changed and doesn't suggest the AI or Color Profiles as a default as it did in earlier versions. You can see an example of the

Save as dialog if you go to: **File>Save As**
